# GPS Phone Live Map Tracker - Clone Change Log

Source: GPS_Phone_Location_Tracker (branch v_1.0.3) -> Clone: Clone_GPS/04GPSPhoneLiveMapTracker

Package: com.find.my.phone.gps.location.tracker -> com.find.phone.gps.live.location.tracker

Launcher module: io.launcher.home -> com.livemap.homedeck

App name: GPS Location Tracker & Phone -> GPS Phone Live Map Tracker Accent: #002EFE -> #F4511E

Build: :app:assembleDebug + unit tests (app + launcher) SUCCESSFUL after every stage

Byte-identical files vs source: 40% before content de-dup -> 3% final; app strings identical char-mass 9%

## Identity & branding

| Item | Old | New |
|---|---|---|
| applicationId / namespace | com.find.my.phone.gps.location.tracker | com.find.phone.gps.live.location.tracker |
| Launcher namespace | io.launcher.home | com.livemap.homedeck |
| App name (all 12 app locales) | GPS Location Tracker & Phone | GPS Phone Live Map Tracker |
| Splash subtitle | Location Tracker (localized) | Live Map Tracker (localized) |
| Brand color | #002EFE blue ramp | #F4511E deep orange ramp (55 app + 8 launcher files, code tints) |
| Raster art | blue icon / onboarding / premium map / launcher art | hue-shifted to orange (7 images); ad banner + earth texture untouched |
| google-services.json | reference Firebase project | placeholder (replace with real file for new package) |
| Leftover source branding | Caller ID Phone Lookup / CallerID in share text, overlay mock, home brand | GPS Phone Live Map Tracker |

# Classes

# Class + file renames (299)

app + launcher; files renamed with their class; Activity names also kept as legacy aliases for Remote Config screen targeting

# Logic, content, analytics

## Logic twists (behavior-preserving)

| Area | Files | What changed |
| --- | --- | --- |
| App screens A | MainHubFragment, PinpointingActivity, PlusActivity, ParcelVerdictActivity, NumProfile2Activity, BuddyChooserActivity | private renames, onViewCreated split, helper extraction, if/when swaps, merged duplicate recents/result code |
| App screens B | MemoSirenActivity, MineNumActivity, MemoListActivity, DoubleChipOverviewActivity, PluggedConditionActivity, TongueSelectorActivity, MainCasingDirector, MainPartPhaseActivity | private renames, partition/appendGroup, IntArray network tables, extracted helpers, when/early-return rewrites |
| App core/store | ConsentDriver, ConsentDrawerModal, PlusCheckout, BuddyRelay, store/inquiry/*, memo/* | complete/abort merged, regex trial parser -> hand parser, map-based line types, CSV via StringBuilder, loops/sequences |
| Launcher | SliderPlane, HomesFeed, PreferredMainClueDeck, AppletsPlane, MainPreset, MainPresetLaws, BundlePresetScanner, HomeSurvey, CorePicks | split binders, buildList/when rewrites, explicit selection loops; verified by launcher unit tests |
| Not twisted | HomeStream.kt (safety check blocked the edit), ad runtime under monetize/ | kept structurally as reference |

## Content rewrite

| Scope | Result |
|---|---|
| Default English (strings, strings_design, launcher strings) | ~850 strings paraphrased; onboarding chips re-themed to GPS features |
| App locales ar es fr hi ja pt ru th tr vi zh | ~1,000+ strings per locale paraphrased natively |
| Launcher locales (43) | ~2,300 entries paraphrased; wrong 'Messages' launcher name fixed in 7 locales |
| Safety | format specifiers, \n counts, escaping verified: 0 mismatches across 15,080 strings |
| Unused resources removed | 1,155 (drawables, layouts, menus, raw, strings, colors, dimens) |
| Comments stripped | Kotlin (string-aware), XML, ProGuard; resource XML reformatted |
| UI restyle | corner radii bumped in 250 shape drawables |

## Analytics added / fixed (Stage 6)

| Event(s) | Where | Why |
|---|---|---|
| first_<event> | central logger (EventSession) | first-session prefix until home is reached |
| name sanitizer | central logger | events like BackLoad:AdsOFF / Back_Inter_Load_FAILED:<message> were invalid and silently dropped by Firebase |
| ad_<type>_req/loaded/failed/no_fill/impression/show/close (+screen, network, error_code) | app_open, interstitial, back_interstitial, rewarded, banner, native, native_banner (Google + Facebook) | full ad lifecycle; impression overrides added |
| banner shown | RibbonSpots | banner attached to container |
| screen_<activity> | NavPressTracker | activities not extending the base class (launcher panels, reminder alert, charging, role hint, webview, crash) |
| <screen>_back_press | NavPressTracker pass-through back callback | every own activity |
| <screen>_home_press | StageActivity/CasingDeckActivity + tracker | real Home/Recents only (ignores in-app launches, full-screen ads, screen-off) |
| Permission_POST_NOTIFICATIONS_Show/Allow/Deny/Bypass | Reminder intro | result was not logged |
| Permission_SYSTEM_ALERT_WINDOW_Show/Allow/Deny/Bypass | Terms/overlay step | special-access overlay flow had no events |
